**Advanced Settings**

Picture Mode:  Setup Buffer:  Minutes

IP Bandwidth:  Tear Down Buffer:  Minutes

ISDN Bandwidth:  Recording:

Secure:   ISDN Restrict  Display Extend Option On

This conference will not be recorded

**Make sure you assign an appropriate name for your conference here!**

My conference runs from 9:00 to 10:00, they almost never run overtime. I will build in a 30-minute pre-test time in case an issue arises. In a later section, I tell everyone that the 8:30 ~ 9:00am time slot is when they should connect. If my conference had more than 15 locations, I would set my start-time to 8:00am.

Because of the way TMS-generated notifications are worded, using these buffers, is almost certain to cause confusion. Use the notes field to explain why you set the times the way you did.

You can set Start Time and End Time, and the Duration will auto-populate, or you can set the Start Time and Duration, and the End Time will auto-populate

Participants | Conference Information

Press "Add Participants" button to add participants.

The IP Bandwidth should be 384 kbps for most "Talking Head" conferences. The Gatekeeper your system is registered to will prevent you from exceeding a set limit (either 384K or 768K). The ISDN Bandwidth setting will be ignored and it is best to leave Secure field set to If Possible. More on these fields later.

Participants Conference Information

Press "Add Participants" button to add participants.

The Type area has 4 choices, they are:

**Automatic Connect:** Systems will be auto-connected at the Start Time

**Manual Connect:** This feature is only available if one or more systems in the conference is a Tandberg. An on-screen prompt to connect will appear on the system designated as Conference Master asking if they want to start the conference. Once the YES choice is clicked, all sites will attempt to connect at that time.

**No Connect:** Used when all locations must dial-in by using their system's remote control (or touch panel).

**Reservation:** The most common use for this is to make sure a room that is not exclusively used for video conferencing, can be marked busy to TMS. This will prevent that room from being booked for video conference while it's being used for something else.

I changed the name in the Title area so there are not a bunch of conferences called "Put conference name here". A good name would be something like "Directors meeting on work assignments".

Notice that the Setup Buffer and Teardown Buffer are set to zero (0).

This box should always be checked. If there are no Tandberg systems in the conference, you will need to contact OET to get your conference extended. If ALL SYSTEMS in the conference are free for at least 10 minutes after the scheduled end time, the Conference Master will get an on-screen message shortly before (at 5 and 1 minute before) the conference ends, asking if the conference should be extended. If the answer is yes, the conference will extend 15 minutes. A conference can be extended multiple times.

The Recording choices may or may not, be available depending your OET Video Contract.

Participants Conference Information

Press "Add Participants" button to add participants

The Picture Mode lets you specify whether or not the participants appear in a split screen (think Hollywood Squares). The difference between Continuous Presence and Enhanced CP is the number of Layout Choices. To see a graphic representation of the choices see the CP-Choices document on the IWEB video pages under Training.

Now that all the Conference Parameters are set up, click the Add Participants button to select the sites needed. If you need to include a location you do not have scheduling authority for, contact the Service Desk at 651-297-1111.

Video Conference Master:   Available  Busy  No Information

**Gary Rademacher's system is the Master but can be changed. This can be changed to anyone in the conference provided they have a compatible Tandberg system. In this example Gary will get the On-Screen message to extend the conference if needed, or the message to start the conference if the Type was set to Manual Connect. If there are no Tandberg systems in the conference, this option will be un-available, and a call to the Service Desk (651-297-1111) will be required to extend the conference.**

The Connection Settings tab will show you how the sites will be connected. The default behavior is for the MCU to dial out to each system. If you set a site for dial-in, TMS will tell the system to dial into the MCU at connect time. The next page explains how to force a system to dial into the conference via the remote control (or touch-panel).

Notice the bottom number in the in the Number column. TMS has been told that "oet o jbraun nts cob" is now a dial-in. The number you see will be the conference dial-in number. Left as-is, TMS will direct that system to dial-in at conference time. To make jbraun actually have to use the system's remote to dial, the Number field must be cleared. More on this later.

Select Main:  Distribution:  Select Floor:

Even if you do not have a need to force a dial-in, it's a good idea to change a location to dial-in, grab the conference number, then change it back to dial-out. The TMS system will only try to connect participants for the 1st 20 minutes. If you've used the recommended 30-minute setup time, locations that did not have their systems on during the first 20 minutes of the Setup window, will not get connected. But if the dial-in number is in the notes (Conference Information Tab), they can dial-in manually w/o have to place a call to you or the Service Desk to get connected.

This page (Conference Settings) should always be checked. If the page is blank there is a problem, and no sites will connect. The error message associated with this condition will be visible in the Participants tab. Several things can cause this. If you can't determine the cause, call the Service Desk (651-297-1111) for assistance.

Conference Layout:  Visibility:   
 Multicast Streaming Enabled:  Unicast Streaming Enabled:   
 Allow Chair Control:  Dual Video Stream:   
 Conference SIP registration:

In the MCU Settings tab, I can choose how my participants are laid out in the split screen I've chosen. OET recommends you use a layout that makes sense for your event. Some layouts will not work well on smaller screens (like the 16 or 20/way split).

This should be set to Private for most purposes. Setting it to public may allow an uninvited guest to connect.

All sites in conference should be Dual Stream capable if this is set to On. You may experience unexpected results at the non-capable sites if this is left at On.

### New Conference

You are here: Booking > New Conference

The conference has been saved.

Conference title: This is a 9:00 to 10:00AM Conf  
Conference id: 66660

Participant(s):  
cob-mse8001p867  
oet o MikeZinnerOffice Stpaul IP: 156.98.61.35  
oet o jbraun nts cob IP: 156.98.61.12  
oet o gary rademacher nts stpaul IP: 156.98.57.66  
oet o jjorgenson stpaul IP: 156.98.61.16

The participants will connect using this route  
cob-mse8001p867 connects to oet o MikeZinnerOffice Stpaul (H323: 6512237614)  
cob-mse8001p867 connects to oet o gary rademacher nts stpaul (H323: 6512237699)  
oet o jbraun nts cob connects to cob-mse8001p867 (H323: ERROR-NO-NUMBER-ON-PORT)  
cob-mse8001p867 connects to oet o jjorgenson stpaul (H323: 6512237776)

**Notice this error message. This is not a problem. It means that Joe will have to dial-in using the controls (remote or touch-panel) on his system. It is important that you follow these procedures to force a manual dial-in. The main reason is to get the conference ID (always a good idea to set at least 1 location to Dial-In temporarily to get the dial-in E.164 number). The other is to reserve a port for the participant.**
